

Inventory Accuracy & Stockout Risk

Portfolio Executive Brief

THE DECISION

Separate enterprise replenishment risk from SKU/location inventory-control work.

8

Critical + High replenishment SKUs

6

Weekly count assignments

472

Biweekly count assignments

\$211,618.40

Cumulative adjustment exposure

DECISION SIGNALS

- Replenishment risk is evaluated at SKU grain across all warehouse locations: 8 of 300 SKUs are Critical or High.
- Count-control risk is evaluated at SKU/location grain: 6 records need weekly counts and 472 need biweekly counts.
- Adjustment exposure is concentrated in Z3-B03 (\$106,636.60) and Z2-B02 (\$104,981.80).
- Accuracy is 100.00%; completion is 94.12%; recount rate is 14.10%; on-time shipment rate is 90.90%.

RECOMMENDED RESPONSE

1. Review 8 Critical + High SKUs for supply, inbound status, and policy settings.
2. Execute 6 weekly and 472 biweekly SKU/location count assignments.
3. Investigate recurring variance and exposure at Z3-B03 and Z2-B02.
