ACTION NOW

- Review the 8 Critical + High SKUs for total supply position, inbound status, and replenishment-policy settings.
- Execute the 6 weekly and 472 biweekly SKU/location cycle-count assignments.
- Investigate the locations with recurring variance and adjustment exposure.

Decision grains: Replenishment risk = SKU across all locations. Count-control risk = SKU/location.

Current SKU Replenishment Risk
SKU replenishment: SKU across all locations

Recommended Cycle-Count Workload
Count-control risk: SKU/location

Locations With Highest Adjustment Exposure
