ACTION NOW

- Review the 8 Critical + High SKUs for total supply position, inbound status, and replenishment-policy settings.
- Execute the 6 weekly and 472 biweekly SKU/location cycle-count assignments.
- Investigate locations with recurring variance and adjustment exposure.

Decision grains:
Replenishment risk = SKU across all locations.
Count-control risk = SKU/location.

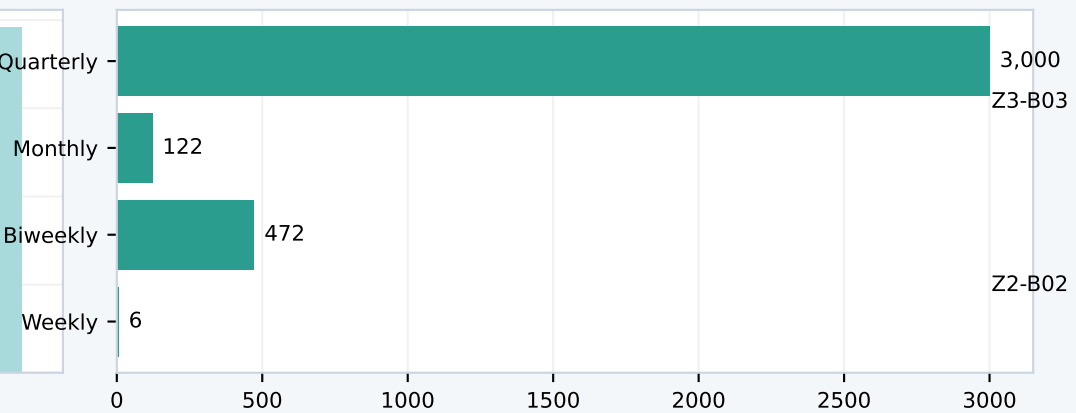

Current SKU Replenishment Risk

Replenishment risk = SKU across all locations

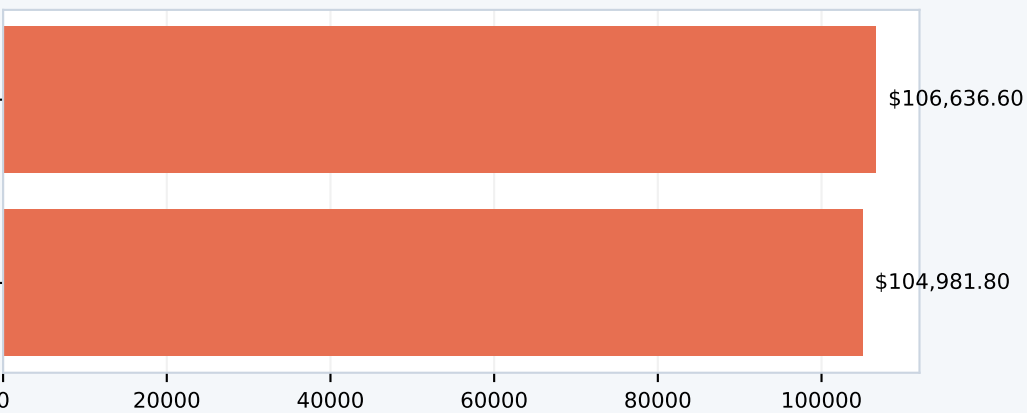

Deterministic synthetic data for portfolio demonstration; no employer or client data is included.

Recommended Cycle-Count Workload

Count-control risk = SKU/location
